The fine art of method development

Get a perfect complement for the Nexera Method Scouting System: LabSolutions MD, the first software that integrates all phases of HPLC method development. Thanks to an Analytical Quality by Design approach, processes become easier, safer and more efficient, thus saving time and minimizing errors.

Screening

The software offers automated screening of various method parameters, according to a chosen multifactorial experimental design.

Optimization

Design of experiments offers accurate retention modelling, even with limited input data, to identify the most robust analytical conditions.

Validation

Benefit from automated batch creation, statistical evaluation and intuitive reporting, all in a LabSolutions database, ensuring data integrity.

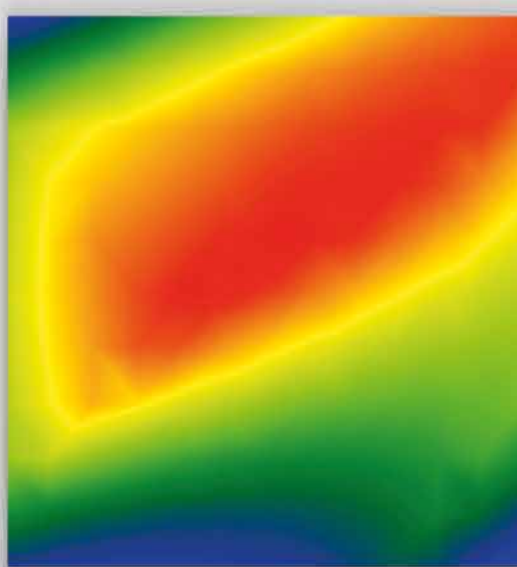

**ANALYTICAL
INTELLIGENCE**
